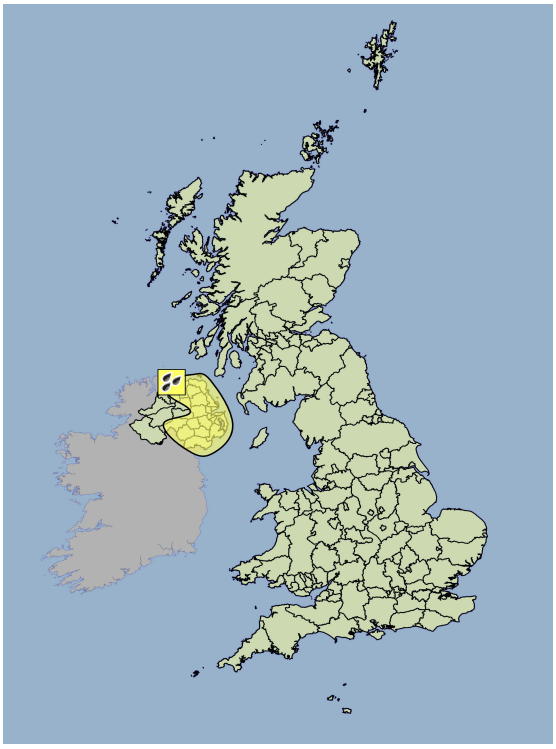
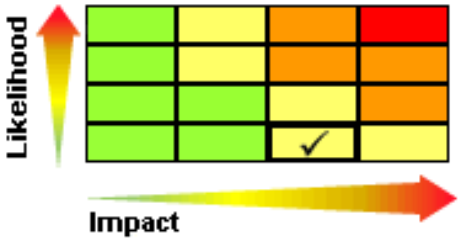
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will drift slowly eastwards across Ireland on Monday accompanied by moist and deeply unstable air. The southeasterly flow on the northern flank of the depression is expected to bring a succession of heavy showers into Northern Ireland. There may be marked local variations in rainfall amounts with some places missing the worst of the rain, although the focus for a more organised band of heavy showers is expected to transfer to more southern parts later in the day.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **09:50 on Mon, 04th Jan 2016** until **23:55 on Mon, 04th Jan 2016**

Bands of heavy showers are expected to continue to affect northern and eastern parts of Northern Ireland during Monday, with a tendency for increased focus in the south of the warning area during the afternoon and evening. Some 5-10 mm of rain could fall in an hour locally. Generally 10-15 mm is expected quite widely through the period and locally 40 mm, mainly on high ground. Given the recent wet weather please be aware of an increased risk of both surface water or river flooding as well as some local disruption to transport.

Please note that the warning has now been extended further westwards across Northern Ireland.
